*** Notes of Significance ***

Fires highlighted in yellow have submitted a FINAL ICS-209 or will no longer meet criteria to be prioritized

[illegible]

Evening Brief

Date: Sunday October 11th, 2020

Weather Summary

Several weak disturbances will bring additional precipitation to parts of Idaho/Wyoming Monday and Tuesday, continuing the seasonably cool conditions there. Elsewhere, high pressure over the West Coast will begin to build eastward across the Western Great Basin, with sharply warmer and drier conditions once again across much of Nevada and eventually eastwards into Utah towards the end of the week. Quite windy across the northern half of the Great Basin thru midweek, but most of that will be over moist fuels. Only across parts of northern Nevada and East-Central Utah will there be a combination of moderate breezes of 20-30 mph and marginally dry fuels thru midweek.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 4	New Fires and Acres: 3 fires for 1.6 acres / 3,518 acres Large Fire Growth

Fuels/Fire Potential

Continued cool/moist conditions and additional precipitation across northern areas should add to the long-lasting moistening of fuels across most of Idaho & Wyoming. However, south of the Idaho border, precipitation was much lighter with the southern third of the Great Basin getting little or no precipitation, with fuels remaining near critically dry levels. Fuels should dry rapidly by the end of the week across most of Nevada, Utah and the AZ Strip.

Live Fuel moisture in low elevation brush, south of the Idaho border remains critically dry, between 60-100% in most areas, which correlates with extreme fire behavior.

Resources:

Aviation within the Great Basin

- 0 VLAT, 3 LATs, 0 CL-415
- 16 SEATs, 0 FB, 6 AA, 0 ASM, 1 LP
- 7 Type 1 Helicopters / 6 Comm.
- 7 Type 2 Helicopters / 6 Comm.
- 15 Type 3 Helicopters / 10 Comm.

Crews Committed within the Great Basin

- 3 IHCs / 0 Available
 - 9 Type 21A / 1 Available
